DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submissions filed on January 7, 2011 and supplemental amendment of 1/18/2011 have been entered. Claims 1- 4 are pending and allowed.

Information Disclosure Statement

The information disclosure statement filed 4/28/2006 complies with 37 CFR 1.98(a)(2), and in response to the copies of references submitted by the applicant the IDS has been reconsidered.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The claims are directed to method of making fermented meat sausages where salt is added to frozen meat at -4°C and liquid olive oil is incorporated subsequently to meat is done at -2 °C prior to mixing stuffing and fermentation of sausage. Applicant's claim addition of salt in the beginning and the temperature of addition of olive oil are critical to the claimed process (See remarks, page 11 Paragraph 2).

The invention as claimed is unobvious over the closest prior art of Bloukas et al (Meat Science Vol.45, No.2, 133-144 1997) hereinafter Bloukas, McKee et al (US 2060422), hereinafter McKee and Domazakis (WO 02/065860) and Gryczka.

Applied reference to **Bloukas** teaches a method for the preparation of sausage or other meat-based products, which is characterized by the incorporation of olive oil. Bloukas teaches of adding olive oil as liquid as well as in pre emulsified form. However, Bloukas does not teach addition of olive oil at the claimed temperature of -2°C. Bloukas is also silent about mixing until desirable meat and fat grain is achieved. and also does not

Art Unit: 1781

teach mixing meat and fat till grain is achieved. Further, applicant's argue that when used in liquid form the method steps of Bloukas achieved a product which was very soft and in taste test the fermented sausage with liquid oil to have rancid taste (See Arguments of 1/18/2011, Page 6, Paragraphs 2-3 and also see Bloukas page 143 paragraphs 2-3). Applicant's also point that Bloukas differ from the claimed method in addition of salt after addition of oil and also discloses that addition of liquid olive oil coats the meat pieces and prevents moisture release, i.e., prevents or delays drying of sausage product. These arguments are persuasive as rancidity of oil indicates that the oil incorporated oxidizes and that the emulsion is not stable and also indicates that order of addition of ingredients and the temperature of adding olive oil lead to results that are not obvious in view of prior art.

Other prior art of record **McKee** teaches of processing of fresh meat at a temperature ranging from 25-32 °F (i.e., -3.8 to 0 °C), which falls in applicant's recited temperature range of -4 to -2 °C. McKee also teaches that if meat grinding or comminuting or processing is done while the meat is at or below freezing the color of the processed meat retains a desirable red or pink color (Page 1, Column 2, lines 50-55 and page 2, Column 1, lines 1-6), but does not teach incorporation of olive oil at optimal temperature of -2 °C and any of the other method steps as recited in the claimed process (claims 1 and 3). McKee also does not teach addition of salt at the beginning of the chopping process and is also not making fermented sausages.

Other prior art applied is **Domazakis** which teaches incorporation of olive oil but the addition of olive oil is after addition of water and also at above freezing (+2 °C) which differs from the claimed process of no water adding and olive oil adding at -2 °C.

Domazakis also differs in the type of product made. Domazakis makes sausage products that are not fermented cooked emulsion type sausages (Remarks, pages 10-11) and teaches addition of water and bread crumbs. Applicant's remarks regarding Domazakis include that Domazakis makes a different type of product and that the incorporation of water and breadcrumbs will lead to water retention in the sausage which will prevent sausage from drying, which is undesirable for fermented dry or semi-dry sausage (Remarks, pages 7 para 3 to page 8, page 10).

Art Unit: 1781

Similarly, applied reference to **Gryczka**, discloses fermentation conditions but does not teach addition of salt and olive oil at the claimed temperatures.

Thus applied references fail to disclose the addition of olive oil and salt at the claimed steps and in the claimed temperature range. Thus, the method of making a fermented sausage wherein salt is added at -4 °C to frozen meat followed by direct incorporation of olive oil at -2 °C leading to a stable fermented dry or semi-dry meat product would not have been obvious to one of ordinary skill in the art. The invention as claimed in the amendment of 1/18/2011 is free of prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
